

Identification Sheets

Scientists have different ways to help them to name and group **living things**.

Identification sheets can help us to name the **living things** we see.

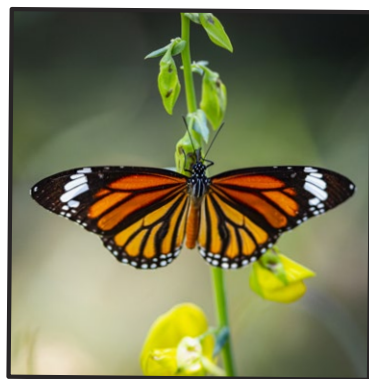

snail

bee

spider

butterfly

To identify means to spot and name something.

Pictures on the **identification sheet** help us to name the **living thing** in its **habitat**.

If we spot a **minibeast** with eight legs, it might be a spider.

If we spot an insect with wings, we can spot the difference using the **identification sheet**.
